

## You Deserve **Better.**

You could have your website built on WordPress, but it wouldn't be worth it.

WordPress was built for blogs, not small businesses. A good small business website can't be built on WordPress without the use of unstable plugins that will break your website every time WordPress runs an update. We are a better choice because small businesses are our specialty.

### Better **SEO**

Right from the start, our websites' innovative, built in architecture improves SEO automatically. Our entire platform is aligned with Google protocol to raise your website's Google ranking.

### Better **Performance**

We optimize our websites to load faster and score higher on the Google PageSpeed test. On WordPress, your website's content will be slowed down by numerous code and software bloats.

## Better **User Experience**

Our natively-responsive websites provide a better user experience across all devices. Turn more visitors into customers with up to 70% higher conversion rates than industry averages.

## Better **Build Times**

We'll build your website in a fraction of the time that it would take to build it on WordPress.

## Better **Security**

We'll keep your website safe and secure with free encryption and auto-renewing SSL certificates. On WordPress, you'll have to pay for manual installation and all security updates.

Good is Good,  
But **Better is Better.**

Don't just make a good choice; make a better choice.

Let us build you a better website today.
